

Natural Hazards

Natural Hazards– What are they? What affects them? (p.8-9)

Tectonic Hazards– Plate tectonic theory (p.11-12) processes at plate margins (p.12-13)

Chile and Nepal earthquake– effects (p.14-15) and responses (p.16-17)

Living with the risk (p.18-19) Reducing the risk of hazards– monitoring, predicting, protection, planning (p.20-21)

Global Atmospheric Circulation/ pressure systems (Polar, Ferrel, Hadley cell)-p.22-23

Tropical storms– what are they? where are they? (P.24) conditions needed for them to form (p.24-25) Their structure (p.26)

Comment on the distribution, frequency and intensity of tropical storms (p.27)

Typhoon Haiyan– Effects and responses (p.28-29)

Monitoring to reduce the effects of tropical storms– monitoring and prediction, protection, planning . (p.30-31)

Extreme Weather in the UK (p.32 &p.38-39) and an example-Somerset floods (p.34-35)

Effects and Managing climate change– mitigation (p.46-47) and adaptation (p.48-49)
evidence of climate change (p.40-41)– natural causes (p.42-43)and human factors (p.44-45)
